Subject: SR Monthly Briefing September 2019

A round-up of the work SR is doing
on your behalf

Dear member,

Scotland's First Minister has unveiled her Government's [programme](#) for the coming year, covering both legislative and policy initiatives. Following the declaration of a climate emergency in the spring, the key focus of the programme is action to tackle climate change.

There were welcome new announcements on a Heat Networks Bill to "support growth in Scotland", while new homes will have to use renewable heat from 2024. Next year's energy statement will assess how much renewable generation Scotland will need to meet the new net-zero emissions target and the key mission of the new Scottish National Investment Bank will be to secure the net-zero transition.
